

Agra Lo-Drift 90™

WHAT IT DOES

- Replaces any non-ionic surfactant
- Reduces driftable fines
- Increases deposition on the leaf surface

USE RATES

Agra Lo-Drift 90™ should be applied at 2 qts per 100 gallons of spray solution. This keeps the correct ratio of both NIS and drift reduction. However, for low volume applications, the use rate of 3 pts works especially well in aerial applications.

PACKAGE SIZES:

- 2 x 2.5 gallon jugs
- 30 gallon drums
- 250 gallon totes

WHAT IT IS

Surfactant and Drift Reduction Agent (ASTM) Official Name
 Premium blend non-ionic surfactant with drift reduction technology built into the formulation. AgraSyst 90™ plus Drift-fiant™ in the same formulation.

- ✓ Originally designed and built to replace normal non-ionic surfactants and add a drift reduction product to make one product
- ✓ Agra Lo-Drift 90™ is a HLB balanced blend
- ✓ Agra Lo-Drift 90™ contains a humectant (*draws moisture from the environment*)
- ✓ Agra Lo-Drift 90™ contains some cationic surfactant, increasing penetration of salt formulated herbicides
- ✓ Agra Lo-Drift 90™ can be used in any application like any other 90% NIS
- ✓ Agra Lo-Drift 90™ has the added convenience of a single jug
