

MaxSO CON™

WHAT IT IS

Methylated Seed Oil and Surfactant and Water Conditioner (ASTM)
MaxSO CON™ is a Premium High Surfactant Methylated Seed Oil Concentrate (HSMOC).
Non-ionic + Cationic + MSO Blend Surfactant Blend

WHAT IT DOES

- Replaces the need for AMS
- Counteracts hard water better than AMS
- MSOs have good spreading properties that enhance coverage over the plant which is important for many pesticides
- HSMOCs like MaxSO CON™ have added non-ionic surfactants (NIS) and emulsifiers to increase penetration into the plant
- HSMOCs are good spreaders with enhanced uptake
- MaxSO CON™ is different than other HSMOCs in that it contains a surfactant blend that includes a cationic surfactant which improves cuticle penetration of negative-charged pesticides such as glyphosate and 2,4-D amine

Increases efficacy of anionic pesticides

Works with multiple chemistries

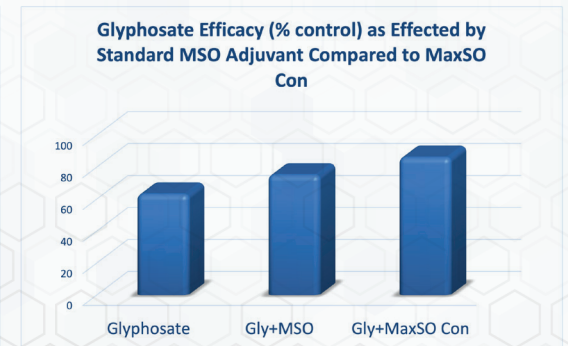

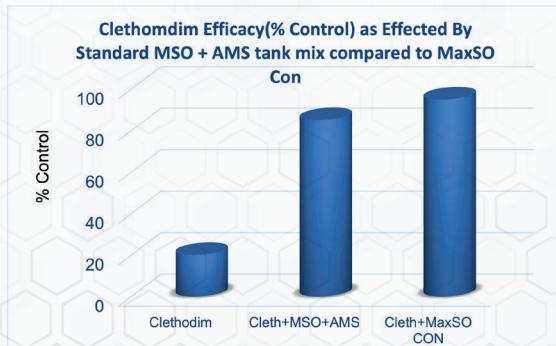

May be used whenever a label calls for MSO

Designed to provide consistent performance

Care should be taken when applications are made to crops under hot and dry conditions

USE RATES

Most labels will call for 1 gallon per 100 gallons of spray solution. However, MaxSO CON™ is formulated to work at lower rates than a normal MSO.

PACKAGE SIZES:

- 2 x 2.5 gallon jugs
- 30 gallon drums
- 250 gallon totes
