

WHAT IT IS

High Surfactant Methylated Seed Oil Concentrate (HSMOC)
 MaxSO™ is a Premium High Surfactant Loaded Methylated Seed Oil (MSO).

HSMOC have added non-ionic surfactants (NIS) surfactants and emulsifiers.

WHAT IT DOES

- MSOs are good spreaders, which gives enhanced coverage over the plant which is important for a lot of pesticides
- Increases the amount of uptake into the plant
- Enhances the spreading of the MSO
- Contains a surfactant blend that includes a cationic surfactant to improve cuticle penetration of negative-charged pesticides including glyphosate

-  A premium MSO with a surfactant blend and emulsifiers
-  Excellent efficacy
-  Works with multiple chemistries
-  MaxSO™ can be used with pesticides that call for an MSO
-  Added surfactant gives a performance advantage over other MSO adjuvants
-  Care should be taken when applications are made to crops under hot and dry conditions

USE RATES

Post-emergent herbicides: Most labels will call for 1 gallon per 100 gallons of spray solution. However, MaxSO™ is built to work at lower rates than a normal MSO.
 As with most MSOs, care should be taken when treated at high temperatures and with drought-stressed crop.

PACKAGE SIZES:

- 2 x 2.5 gallon jugs
- 30 gallon drums
- 250 gallon totes
